ABOUT US

DataNote is a leading & technically high-end ERP that helps an organization to integrate, streamline and scale their business at the desired heights by virtue of making their entire business operation system driven rather than human-driven. DataNote ERP can be offered in On-Premise mode, On Cloud Mode, and Software As Service Mode. Our modern technology offers OpenLogic Framework where the enterprise doesn't need to share all the data/business logic/trade secrets/operation logic and formulas, that's not possible in the case of traditional ERP implementation.

OpenLogic ERP Framework consists of Structure Engine and Logic Engine. Here, we handle the Structure Engine part while Logic Engine is free to manage by the client. In that way, the client can execute & monitor the framework along with making it confidential from the rest of the world.

REASONS YOU WILL LOVE WORKING WITH US

EASILY SCALABLE SOLUTIONS

DataNote ERP can adjust to a business's changing needs as it grows. It is modular, flexible and extensible, allowing for the addition or removal of modules and resources without significant downtime or customization.

INDUSTRY-BEST MODULES

DataNote gives modules which are designed for specific industries or business processes. These modules provide specialized functionality that is tailored to the unique requirements. We offer comprehensive functionality, integration capabilities, and flexibility, helping organizations optimize their operations and gain a competitive advantage.

BUSINESS PROCESS CONFIDENTIALITY

DataNote ERP ensures business process confidentiality by using role-based access control, data encryption, audit trails, and backup and disaster recovery procedures to secure sensitive information stored in the system.

SOURCE CODE OWNERSHIP

DataNote ERP provides Logical source code ownership, which means that the company retains ownership of the software's source code. This ensures that the company can customize, modify, and enhance the software as needed, without being reliant on the vendor.

INTEGRATION WITH IOT NETWORK

DataNote ERP enables seamless integration with IoT networks, allowing real-time monitoring and analysis of IoT data to enhance business processes and improve decision-making.

FLEXIBLE PRICING MODEL

With DataNote, customer can select a package based on specific modules and functionalities as per their business requirements and present practices. This in return gives the customer enough flexibility to go for only those services which are actually required by him and thus increases customer satisfaction, and also can plan his entire ERP implementation phase-wise with proper financial implications associated with each phase.

OUR SERVICES

ERP

DataNote includes more functionalities and integration available as compared to the conventional ERPs in the market. DataNote ERP gives a business the flexibility and scalability to define/configure its own business logic and business flow in the ERP system without going into the hardcore coding, as such this ERP is self-reliant.

In today's highly competitive business world, management should aim beyond survival, at market leadership. You need all the right tools. DataNote ERP is a complete business solution, that's in your budget, whether you are a small firm or an SME or a large organization with any given process structure complexity.

OUR SERVICES

CRM

DataNote CRM is a web-based customer relationship management platform. The flexible suite of applications includes tools to manage sales automation, field service, customer support and channel management. With DataNote CRM, companies can maintain a customer database, track opportunities in the pipeline, monitor to-do items, store documents, and send appointments to Google Calendar.

The system also interfaces with Google Drive for document storage. Users have the ability to view customer data by segment through this cloud-based system. DataNote CRM is recommended to small companies in several industries, including pharmaceuticals, software, retail, consulting, and manufacturing; it is designed to be accessed easily for reps on the road.

OUR SERVICES

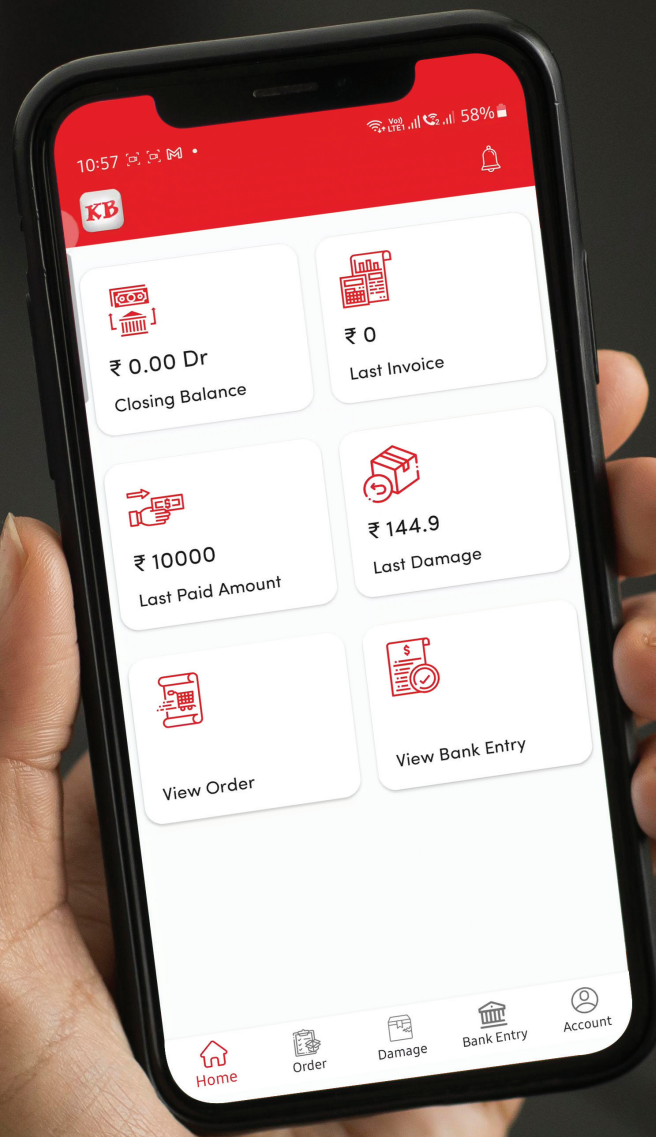

POS

For decades, DataNote POS systems have been excelling the motive of providing prompt solutions to restaurateurs. This solution has been born out of our mere understanding of outlet owners' needs; to recognise the best technology solution for the issue. We aim to provide solutions to restaurant owners in form of tools, insights, and control they need to achieve their goals and customer satisfaction.

That said, OpenLogic POS acts as the central control to assist your business, to manage various aspects such as sales, inventory management, payment processing, and customer management
