

Reducing Complex Coding

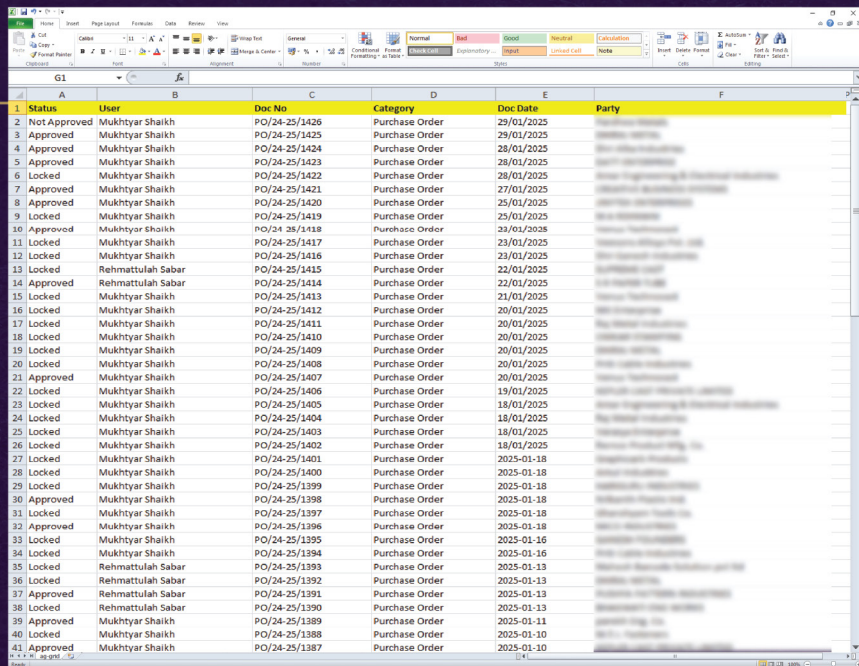

AI Powered Enterprise Application Platform

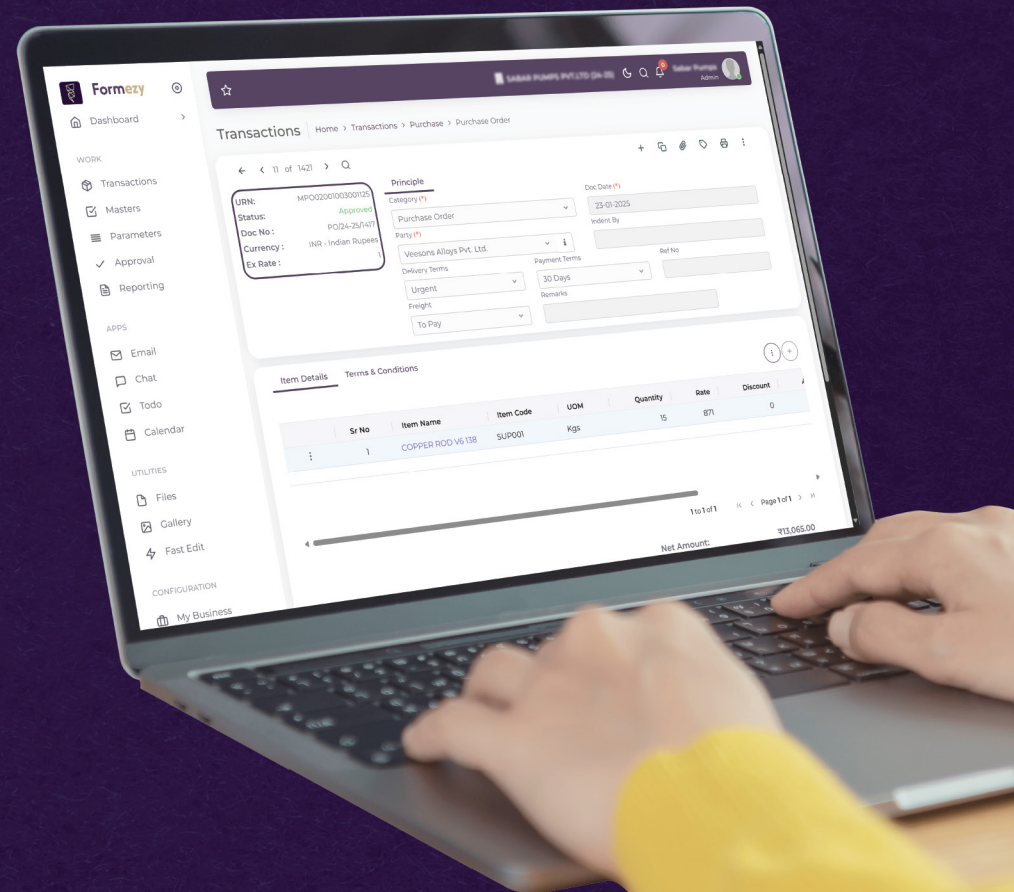

www.formezy.com

Transform Your Business with Low-Code/No-Code EAP Software

An **Enterprise Applications Platform (EAP)** is a robust software solution that acts as a centralized framework for managing and executing various business applications and processes within an organization. EAPs are ideal for businesses with outdated systems, offering a modern alternative to expensive, disruptive overhauls. Unlike traditional ERPs, EAPs utilize a flexible, modular approach, allowing businesses to adopt packaged solutions that can be used individually or integrated to create efficient, scalable business workflows and processes.

Benefits of Our Low-Code/No-Code Based EAP Software

	User Chat Facility		Leaderboard Announcement		Gamification with Badges		Calendar Notes
	Task Management		Import from Excel, Google Sheets		Interactive Graphs		Favorites / Bookmark
	Location Tracking		Export to Excel, PDF, JSON & CSV		Audit Trail Log		Document Attachment
	Drag & Drop Customization		OTP - Two Factor Authentication		WhatsApp Alerts		Centralized File Manager
	Dark & Light Mode		Email Inbox & Outbox		Native Mobile App		White / Private Label Facility

Use Cases of Formezy Platform

Certainly! Managing records in a centralized manner using Formezy, a low-code/no-code software development and design framework, can provide numerous benefits across different sectors. Here are several compelling use cases:

Enterprise Resource Planning (ERP)

Use Case : Integrate business functions (Finance, HR, inventory) into one system.

Benefit : Enhance efficiency, accuracy, and decision-making with centralized data.

Rental Management

Use Case : Centralize rental transactions, inventory, and customer data in one system.

Benefit : Simplify operations, improve service, and track rentals easily.

Lab Management

Use Case : Centralize lab data, equipment, and workflows in one system.

Benefit : Streamline processes, improve accuracy, and enhance resource utilization.

Insurance Data Management

Use Case : Centralize and organize policyholder information, claims, and coverage details.

Benefit : Improve efficiency, accuracy, and compliance by having quick access to comprehensive, up-to-date insurance data.

Project Management

Use Case : Maintain a centralized repository for project documentation, timelines, and team assignments.

Benefit : Enhance collaboration and accountability, ensuring everyone has access to up-to-date project information.

Legal & Compliance Management

Use Case : Centralize legal documents, regulations, and compliance processes in one system.

Benefit : Ensure regulatory compliance, reduce risks, and streamline legal workflows with organized, easily accessible data.

Education and Learning Management

Use Case : Manage student records, course materials, assessments, and attendance centrally for educational institutions.

Benefit : Provide educators with comprehensive insights into student performance and engagement.

Health Records Management

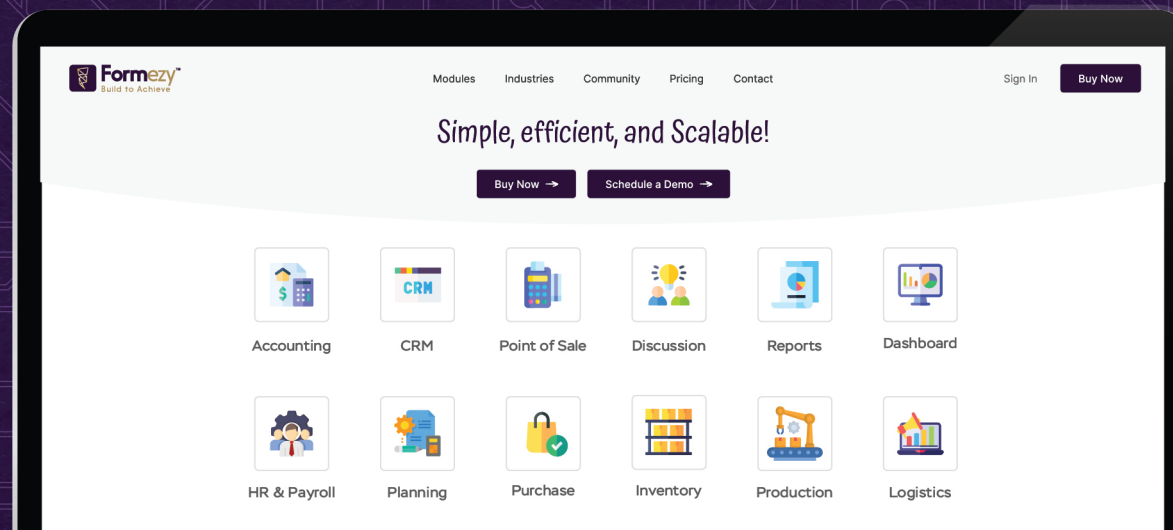

Use Case : Maintain centralized patient records, treatment history, and appointment schedules in healthcare settings.

Benefit : Improve patient care coordination and ensure timely access to crucial health information.

Difference Between Low Code / No Code Vs Traditional Code

	LOW CODE / NO CODE	TRADITIONAL CODE
DEVELOPMENT SPEED	Faster; Drag and drop tools and Pre-built components	Slower as it requires writing code from scratch
TECHNICAL SKILLS REQUIRED	Minimal coding knowledge required	Requires in-depth coding knowledge and experience
CUSTOMIZATION	Customisation option available through various templates and code level changes	Highly customizable as you control the entire codebase
COST	Lower due to reduced development time and resources	Higher costs due to time, expertise, and resources required for custom development
MAINTENANCE	Easy; vendors provide regular updates/support	Hard; require a dedicated team for bug fixes, updates, maintenance
SECURITY	Managed by platform provider, which may limit control	Full control over security measures, but also full responsibility
INTEGRATIONS	By default integrations available and others can be done during customisation	All integration can be done only through coding and customisation
UPDATES AND ITERATIONS	Quicker iteration cycles due to minimal coding requirements	Slower iteration due to manual coding and testing processes

Wide Range of Integrations
